## 2. Hazards Identification

<b>Physical state</b>	Solid.
<b>Appearance</b>	Shapes, Solids, Tubes & Turnings.
<b>Emergency overview</b>	<b>WARNING</b>  May cause allergic respiratory and skin reactions. Possible cancer hazard - may cause cancer based on animal data. Danger of serious damage to health by prolonged exposure.  Warning: May Form Combustible (Explosive) Dust - Air Mixtures
<b>OSHA regulatory status</b>	This product is considered hazardous under 29 CFR 1910.1200 (Hazard Communication).
<b>Potential health effects</b>	
<b>Routes of exposure</b>	Inhalation. Skin contact. Eye contact.
<b>Eyes</b>	Molten material will produce thermal burns. Elevated temperatures or mechanical action may form dust and fumes which may be irritating to the eyes. Acute exposure to cobalt metal, dust, and fume may cause irritation of skin and eyes.
<b>Skin</b>	May cause allergic skin reaction. Hot or molten material may produce thermal burns. Workers allergic to nickel may develop eczema or rashes. Acute exposure to cobalt metal, dust, and fume may cause irritation of skin and eyes. In sensitized individuals, exposure causes an asthma-like attack, with wheezing, bronchospasm, and dyspnea.
<b>Inhalation</b>	May cause allergic respiratory reaction. Elevated temperatures or mechanical action may form dust and fumes which may be irritating to mucous membranes and respiratory tract. In sensitized individuals, exposure causes an asthma-like attack, with wheezing, bronchospasm, and dyspnea.
<b>Ingestion</b>	Not relevant, due to the form of the product in its manufactured and shipped state. However, ingestion of dusts generated during working operations may cause nausea and vomiting.
<b>Target organs</b>	Lungs.
<b>Chronic effects</b>	Contains nickel. Chronic inhalation of metallic oxide dust/fume may cause metal fume fever. Repeated or prolonged inhalation of iron oxide dust may lead to the lung disease known as Siderosis. Prolonged and repeated overexposure to dust and fumes can lead to benign pneumoconiosis (stannosis). The effects might be delayed. Heating above the melting point releases metallic oxides which may cause metal fume fever by inhalation. The symptoms are shivering, fever, malaise and muscular pain. Exposure to manganese fume/dust can affect the central nervous system (apathy, drowsiness, weakness and other chronic symptoms such as postural tremors).
<b>Signs and symptoms</b>	Irritation of nose and throat. Irritation of eyes and mucous membranes. Coughing. Shortness of breath. Wheezing. Sensitization.

**Potential environmental effects** Alloys in massive forms present a limited hazard for the environment. The product contains a substance which may cause long-term adverse effects in the environment.

### 3. Composition / Information on Ingredients

Components	CAS #	Percent
Copper	7440-50-8	71-90
Aluminum	7429-90-5	7-16
Manganese	7439-96-5	0-14
Iron	7439-89-6	2-6.5
Nickel	7440-02-0	0-6
Cobalt	7440-48-4	0-3
Silicon	7440-21-3	0-1.5
Zinc	7440-66-6	<0.5
Tin	7440-31-5	<0.3

**Composition comments** All concentrations are in percent by weight unless ingredient is a gas. Gas concentrations are in percent by volume.

### 4. First Aid Measures

#### First aid procedures

##### Eye contact

Do not rub eyes. Remove any contact lenses. Flush eyes thoroughly with water, taking care to rinse under eyelids. If irritation persists, continue flushing for 15 minutes, rinsing from time to time under eyelids. If discomfort continues, consult a physician.

##### Skin contact

Contact with dust: Wash skin with soap and water. In case of allergic reaction or other skin disorders: Seek medical attention and bring along these instructions. In case of contact with hot or molten product, cool rapidly with water and seek immediate medical attention. Do not attempt to remove molten product from skin because skin will tear easily. Cuts or abrasions should be treated promptly with thorough cleansing of the affected area.

##### Inhalation

In case of exposure to fumes or particulates: Get medical attention if discomfort persists.

##### Ingestion

Rinse mouth thoroughly if dust is ingested. Only induce vomiting at the instruction of medical personnel. Get medical attention if any discomfort continues.

#### Notes to physician

Treat symptomatically. Symptoms may be delayed.

#### General advice

Get medical attention if any discomfort develops. Seek medical attention for all burns, regardless how minor they may seem. Show this safety data sheet to the doctor in attendance.

### 5. Fire Fighting Measures

#### Flammable properties

Solid metal is not flammable; however, finely divided metallic dust or powder may form an explosive mixture with air. In a fire, ferronickel may form highly toxic substances: iron carbonyl and nickel carbonyl, a known carcinogen.

#### Extinguishing media

##### Suitable extinguishing media

Special powder against metal fires. Dry sand.

##### Unsuitable extinguishing media

Do not use water or halogenated extinguishing media. Do not use water on molten metal: Explosion hazard could result.

#### Protection of firefighters

##### Specific hazards arising from the chemical

During fire, gases hazardous to health may be formed.

##### Protective equipment and precautions for firefighters

Self-contained breathing apparatus and full protective clothing must be worn in case of fire. Selection of respiratory protection for fire fighting: follow the general fire precautions indicated in the workplace.

#### Fire fighting equipment/instructions

Move containers from fire area if you can do it without risk.

#### Hazardous combustion products

Metal oxides.

## 6. Accidental Release Measures

<b>Personal precautions</b>	Ensure adequate ventilation. Avoid inhalation of dust and contact with skin and eyes. Wear protective clothing as described in Section 8 of this safety data sheet.
<b>Environmental precautions</b>	Avoid release to the environment. Do not contaminate water.
<b>Methods for containment</b>	Not applicable.
<b>Methods for cleaning up</b>	Allow spilled material to solidify and scrape up with shovels into a suitable container for recycle or disposal. Collect dust using a vacuum cleaner equipped with HEPA filter. If not possible, gently moisten dust before it is collected with shovel, broom or the like. The vacuum cleaner should be explosion-proofed. Avoid dust formation. This material and its container must be disposed of as hazardous waste.
<b>Other information</b>	Clean up in accordance with all applicable regulations.

## 7. Handling and Storage

<b>Handling</b>	Welding, burning, sawing, brazing, grinding or machining operations may generate fumes and dusts of metal oxides. Provide adequate ventilation. Avoid contact with sharp edges and hot surfaces. Avoid generation and spreading of dust and fumes. Avoid inhalation of dust and contact with skin and eyes. Avoid contact with hot or molten material. Dust clouds may be explosive under certain conditions. Take precautionary measures against static discharges when there is a risk of dust explosion. Use explosion-proof electrical equipment if airborne dust levels are high. To prevent and minimize fire or explosion risk from static accumulation and discharge, effectively bond and/or ground product transfer system. Wear appropriate personal protective equipment. Do not use water on molten metal. Do not eat, drink or smoke when using the product. Keep the workplace clean. Observe good industrial hygiene practices.
<b>Storage</b>	Keep dry. Store away from incompatible materials.

**Exposure guidelines**

Follow standard monitoring procedures.

**Engineering controls**

Provide adequate ventilation. Observe Occupational Exposure Limits and minimize the risk of inhalation of dust. Ventilate as needed to control airborne dust. Use explosion-proof ventilation equipment if airborne dust levels are high. Special ventilation should be used to convey finely divided metallic dust generated by grinding, sawing etc., in order to eliminate explosion hazards.

## Personal protective equipment

### Eye / face protection

Wear dust-resistant safety goggles where there is danger of eye contact. In addition to safety glasses or goggles, a welding helmet with appropriate shaded shield is required during welding, burning, or brazing. A face shield is recommended, in addition to safety glasses or goggles, during sawing, grinding, or machining.

### Skin protection

Wear suitable protective gloves to prevent cuts and abrasions. When material is heated, wear gloves to protect against thermal burns. Suitable gloves can be recommended by the glove supplier. Wear suitable protective clothing.

### Respiratory protection

When engineering controls are not sufficient to lower exposure levels below the applicable exposure limit, use a NIOSH approved respirator for dusts. A respiratory protection program that meets OSHA's 29 CFR 1910.134 and ANSI Z88.2 requirements must be followed whenever work place conditions warrant a respirator's use. Seek advice from local supervisor. In case of inadequate ventilation or risk of inhalation of dust, use suitable respiratory equipment with particle filter.

### General hygiene considerations

Always observe good personal hygiene measures, such as washing after handling the material and before eating, drinking, and/or smoking. Routinely wash work clothing and protective equipment to remove contaminants. Contaminated uniforms should be laundered separately from other clothing to prevent potential cross-contamination. If possible, an industrial laundry service should be used to eliminate the possibility of contaminating the home environment. Handle in accordance with good industrial hygiene and safety practices. Observe any medical surveillance requirements.

## 9. Physical & Chemical Properties

<b>Appearance</b>	Shapes, Solids, Tubes & Turnings.
<b>Color</b>	Yellow to red.
<b>Odor</b>	None.
<b>Odor threshold</b>	Not available.
<b>Physical state</b>	Solid.

<b>Decomposition temperature</b>	Not available.
<b>Bulk density</b>	0.27 - 0.323 lb/in <sup>3</sup> @ 68 F

## 10. Chemical Stability & Reactivity Information

<b>Chemical stability</b>	Massive metal is stable and non reactive under normal conditions of use, storage and transport.
<b>Conditions to avoid</b>	Contact with incompatible materials. Contact with acids will release flammable hydrogen gas. Avoid dust formation. Dust clouds may be explosive under certain conditions.
<b>Incompatible materials</b>	Acids. Ammonium nitrate. Fluoride. Halogens. Nitrates. Phosphorus. Strong oxidizing agents. Sulphur.
<b>Hazardous decomposition products</b>	Welding, burning, sawing, brazing, grinding or machining operations may generate dusts and fumes of metal oxides.

**Possibility of hazardous reactions**

Hazardous polymerization does not occur. Hot molten material will react violently with water resulting in spattering and fuming.

## 11. Toxicological Information

**Toxicological data****Components****Test Results**

Silicon (7440-21-3)

Acute Oral LD50 Rat: 3150 mg/kg

**Acute effects**

Acute exposure to cobalt metal, dust, and fume may cause irritation of skin and eyes. In sensitized individuals, exposure causes an asthma-like attack, with wheezing, bronchospasm, and dyspnea. Ingestion of cobalt may cause nausea, vomiting, diarrhea, and a sensation of hotness. High concentrations of freshly formed fumes/dusts of metal oxides can produce symptoms of metal fume fever.

**Local effects**

May cause irritation through mechanical abrasion.

**Sensitization**

May cause sensitization by inhalation and skin contact.

**Chronic effects**

Harmful: danger of serious damage to health by prolonged exposure through inhalation. Chronic inhalation of high concentrations of iron oxide fumes or dust may lead to benign pneumoconiosis (siderosis). Prolonged and repeated overexposure to dust and fumes can lead to benign pneumoconiosis (stannosis). Chronic exposure to breathing low levels of manganese dust or fume over a long period of time can result in "manganism," a disease of the central nervous system similar to Parkinson's Disease, gait impairment, muscle spasms and behavioral changes. Chronic inhalation of metallic oxide dust/fume may cause metal fume fever.

**Carcinogenicity**

Possible cancer hazard - may cause cancer based on animal data.

**ACGIH Carcinogens**

Aluminum (CAS 7429-90-5)

A4 Not classifiable as a human carcinogen.

Cobalt (CAS 7440-48-4)

A3 Confirmed animal carcinogen with unknown relevance to humans.

Nickel (CAS 7440-02-0)

A5 Not suspected as a human carcinogen.

**IARC Monographs. Overall Evaluation of Carcinogenicity**

Cobalt (CAS 7440-48-4)

2B Possibly carcinogenic to humans.

Nickel (CAS 7440-02-0)

2B Possibly carcinogenic to humans.

**US NTP Report on Carcinogens: Anticipated carcinogen**

Nickel (CAS 7440-02-0)

Anticipated carcinogen.

**US NTP Report on Carcinogens: Known carcinogen**

Nickel (CAS 7440-02-0)

Known carcinogen.

**Epidemiology**

Based on epidemiological studies, pre-existing pulmonary disorders may be aggravated by prolonged exposure to high concentrations of metal dust or fumes. Pre-existing skin conditions including dermatitis might be aggravated by exposure to this product.

**Mutagenicity**

Suspected of causing genetic defects.

**Neurological effects**

Exposure to manganese fume/dust can affect the central nervous system (apathy, drowsiness, weakness and other chronic symptoms such as postural tremors).

**Reproductive effects**

In experimental animal studies, cobalt produces adverse developmental effects at doses that produce maternal toxicity. There are no human data on cobalt exposure during pregnancy.

**Teratogenicity**

Nickel: Has shown teratogenic effects in laboratory animals.

**Symptoms and target organs**

Irritation of nose and throat. Irritation of eyes and mucous membranes. Coughing. Wheezing. Shortness of breath. Sensitization.

**Further information**

Welding or plasma arc cutting of metal and alloys can generate ozone, nitric oxides and ultraviolet radiation. Ozone overexposure may result in mucous membrane irritation or pulmonary discomfort. UV radiation can cause skin erythema and welders flash.

## 12. Ecological Information

**Ecotoxicity**

Alloys in massive forms present a limited hazard for the environment. The product contains a substance which may cause long-term adverse effects in the environment.

**Persistence and degradability**

The product is not biodegradable.

**Bioaccumulation / Accumulation**

The product contains potentially bioaccumulating substances.

**Partition coefficient (n-octanol/water)**

Not available.

**Mobility in environmental media** Alloys in massive forms are not mobile in the environment.

### 13. Disposal Considerations

**Waste codes** Not regulated.

**Disposal instructions** This material and its container must be disposed of as hazardous waste. Dispose in accordance with all applicable regulations.

**Waste from residues / unused products** Recover and recycle, if practical. Solid metal and alloys in the form of particles may be reactive. Its hazardous characteristics, including fire and explosion, should be determined prior to disposal.

**Contaminated packaging** Not applicable.
